Summary

Python Backend Developer with hands on experience in building production GenAI applications, REST APIs, report generation pipelines, and automated reporting systems using FastAPI, PostgreSQL, Docker, and AWS. Experienced in integrating LLMs, RAG based workflows, prompt engineering, agentic AI, LangChain, API orchestration, ETL and agentic automation systems into backend applications. Experienced with CI/CD workflows for deploying backend and AI driven services, including configuration versioning and automated testing and deployment. Familiar with developing and managing AI applications across environments, ensuring stable deployments and controlled resource usage.

Education

Rashtrasant Tukadoji Maharaj Nagpur University Aug 2021–Mar 2025
B.Tech in Electronics and Telecommunication | 7.9 CGPA

Maharashtra State Board of Secondary and Higher Secondary Education July 2020–Feb 2021
Senior Secondary (XII) | 93.50%

Experience

Inputiv, Python Backend Developer Nov 2025-Ongoing

- Building an automated reporting platform for MSP clients by integrating third party IT management APIs, designing PostgreSQL schemas, and developing FastAPI REST endpoints. Built a Python based report generation system using OpenAI LLMs with structured prompts and RAG workflows to create data driven PowerPoint reports, replacing a manual monthly process. Worked on AI driven automation using agent style workflows and API based orchestration. Deployed applications using Docker with CI/CD, versioning, testing, and environment-based deployments with basic monitoring.

Edverciity by liveTechskills, Software Developer Engineer and Trainer April 2025-Oct 2025

- Developed an LMS Attendance & Engagement Analytics Platform using Flask and MySQL to track student attendance and participation. Built REST APIs and dashboards to visualize engagement trends and support instructor decision-making.

ECDS, Embedded Software Developer Intern Oct 2024-March 2025

- Built an Intelligent Solar Panel Monitoring System using IoT and Ubidots, enhancing real time tracking and improving energy generation efficiency by 15% over traditional methods.

Avrdus Technologies, Python Developer Intern March 2024-August 2024

- Assisted in developing Python scripts for basic backend tasks, data processing, and API integrations. Worked with Pandas and Requests to handle data, generate simple reports, and support routine application workflows.

Skills

Programming Languages and Frameworks: Python, FastAPI, SQL, Java, Flask, Django, C/C++, JAVA, PostgreSQL

Software Development & Cloud: Linux, Docker, PostgreSQL, Agile Methodology, Git, SDLC, AWS Lambda, CI/CD Pipelines, REST API Development, Third party API Integrations, Visual Basic, PyTest, API Testing

Dev Practices & Data Tools: Agile Methodology, SDLC, JIRA, Scrum Framework, Project Documentation, Data Modeling, Supabase, ETL

AI & Automation: LLM Integration, RAG, Agentic AI Workflows, LangChain, n8n, Prompt Engineering, AI orchestration frameworks, Model & Prompt Versioning, OpenAI

Projects

AI-Powered MSP Operations & Reporting Platform

- Developed an AI-agent powered MSP platform using Python, FastAPI, LLMs, tool calling, and REST APIs, enabling engineers to query and analyze IT security data from NinjaOne, Autotask, Bitdefender, and ConnectSecure through agent driven API orchestration. Built agentic workflows and AI powered business reporting using LLM prompting, RAG, automated data processing, client site level data scoping, and PowerPoint generation to transform multi vendor IT data into contextual insights and client business reviews also reducing manual IT technician

effort by approximately 60% and saving around 50% of the time spent on data analysis and client reporting.

MSP Reporting & Analytics Platform

- Architected and deployed a multi tenant MSP analytics platform for Inputiv LLP using FastAPI, PostgreSQL and built async parallel data ingestion pipelines using aiohttp, designed a JSONB based database schema with per org data isolation and secure OAuth2 API key credential, and built REST API endpoints covering report generation, compliance tracking and automated email delivery containerised with Docker and deployed on Render.

Automated MSP Client Business Review Report Generator

- Built a production grade Python PowerPoint generation engine converting live JSON and OpenAI LLM generated content into fully branded MSP client presentation, featuring dynamic chart rendering, content aware table pagination using Adobe AFM font metrics, modular per integration slide sections with conditional rendering, and served via a FastAPI streaming endpoint replacing a fully manual monthly reporting process.

AI-Powered Institute Management & Operations Platform

- Built an institute management platform in Django and PostgreSQL with role based student, trainer and admin portals, student and trainer performance reports, auto-graded coding exams via Judge0, and a FastAPI agentic AI assistant (Claude tool calling) with server enforced data access and audit logging.

Certifications

- Diploma in IT Programming (Link)
- Course on Python (Link)
- Docker Foundations Professional Certificate(Link)
- Agile Methodology by Cognizant (Link)
- Product Management by Electronics Arts (Link)
- Project Manager Job Simulation by Siemens (Link)
- Career Essentials in Data Analysis by Microsoft and LinkedIn(Link)

Positions of Responsibility

National Service Scheme | Mentor August 2023 – March 2024

Collaborated with faculty and volunteers to organize events promoting environmental awareness, health campaigns, and social responsibility.

National Service Scheme | Volunteer July 2024 – Feb 2025

As an NSS volunteer, worked closely with NGOs to organize community outreach programs, focusing on social welfare, environmental initiatives, and educational campaigns.
